Engineer, founder
and CEO of Global
Food Garden

Peder Wenderfors
Organic gardener,
pastor and
entrepreneur

Dietmar Schwarz
Retired scientist
for vegetables and
ornamental crops

Jenny Jakobsson
Sustainability
strategist, entrepre-
neur and lecturer

Tomas Hagwall
Business developer
and innovation
management leader

Gina Strydom
Farmer and
Foundations for
Farming teacher

Mentoring Program

During the training, you will be supported by online mentors. They will provide answers to your questions, will help to find solutions when you encounter problems and will encourage you in your journey. They will help you to get the most out of this training course.

Wicking Beds

Wicking Beds combine traditional gardening with a water circulation system. This has the following advantages:

- Wicking Beds can be built with locally available materials.
- Wicking Beds reduce water consumption.
- Capillary irrigation stimulates the roots to grow deeper and thus strengthens the plant.
- You can regulate the humidity in the soil.
- Water and fertilizer stay in the system. They are collected in a water tank, and then circulated back into the Wicking Bed.

Who is this course for?

This training is for your organization, if you want to invest in:

- 🌱 entrepreneurs who themselves have built up successful business activities on their own initiative, finances and strength.
- 🌱 leaders who have a big focus on entrepreneurial and vocational training for young people, often from poor backgrounds.
- 🌱 leaders who are locally rooted, who have worked faithfully on their projects and have experience in vegetable cultivation.

Investment

Investing in your Wicking Bed:

- Material
- Access to a place to build the Wicking Bed

Investing in your Training:

Training costs for each group supported by your organisation are € 1000.

Commitment

Ensure that all participants from your organisation:

- Attend all training sessions and complete all assignments
- Build a Wicking Bed
- Participate in all impact measurement initiatives

Success Stories

Madagascar

They run a small school as well as agricultural projects. Growing vegetables plays a central role in everyday school life. The children learn to produce their own lunchtime meals. As soon as the course started, the knowledge was passed on to the students. The practical implementation of Wicking Bed construction is combined with subjects such as maths, geology and languages, which makes the lessons more tangible.

Democratic Republic of Congo

They had to deal with a shortage of space in the city of Bukavu. At a kid's camp, they taught 165 children how to build Wicking Beds out of waste material. The kids brought the knowledge home to their families who then were able to build their own Wicking Beds and to grow vegetables for themselves.

Honduras

Due to time zone difference they were only able to watch the video recordings of our training. Still they were able to build their own Wicking Beds and started to run their own training courses. A few months later they introduced the Wicking Beds to the National University of Honduras to train students in this technology.
